Bruno Mendes

README 3

Here I will leave two links. One is for the repository of a package that I'm creating and the other is for a shiny app that I have created.

The IM-MP-PC model

I have identified that there is no package dedicated to the simple IM-MP-PC model. Following this I'm developing a package for it.

The repository for the package is [HERE](#). There you can find the code and the documentation for the package.

The name of the library is `policymodel` and it is available on my GitHub.

This is something that i recently started and I will be updating it as I go. Its in a very initial fase. This model is a simple model that incorporates IS(Investment-Saving), MP(Monetary Policy) and PC(Phillips Curve) equations with shocks.

Shiny App

I have created a shiny app that simulates this IM-MP-PC model. The app is available [HERE](#)

The app is very simple and it is a work in progress. I will be updating it as I go. If the app is not working, its because I'm doing some updates on it.

Since the app is hosted in a public server, it may take a while to load.
